

Just Thinkin' About...

By Pastor Ron Lundy

Science or philosophy...?

If a tree falls in the forest and there is no one there to hear it does it make any noise? The purely scientific mind would reply, unquestionably, yes. According to the laws of physics it has to make noise. Yet, this question is debated in philosophy classes as if science did not exist. I think I figured out why.

Certain philosophy classes are warm and cozy incubators of comfortably gullible minds. Therein potential scientists are awakened to the ill-conceived notion that ignoring certain laws of nature is perfectly acceptable, yea more than acceptable, it is commendable, and shows one to be exceptionally brilliant. And so Darwin finds credibility as a scientist, theories are declared to be uncontested facts, and evolution flourishes among those happy to be comfortably kept from the horrifying concept of accountability to their Creator.

The conclusion of this "philoscience" is: That it would be virtually impossible for God to create the universe out of nothing, therefore the universe created itself out of nothing... *What?!*

Some undeniable facts remain:

1. We are here.
2. Self creation is impossible.
3. God has revealed Himself as our Creator.
4. He lives in my heart.

The only place to be comfortably kept from the consequences of our accountability to God is in the person of Christ. "Come unto me all ye that labor and are heavy laden, and I will give you rest", says Jesus Christ, your Creator. (Matthew 11:28)
